Real Time Dashboard and One Touch DataLogging!

Your car is a valuable investment. The Dashboss is the most affordable way to see exactly how well your car or truck is performing. With one simple iPhone® app, you can have the equivalent of thousands of dollars of diagnostic equipment in the palm of your hand.

DashBoss™ consists of a small Bluetooth "gateway" module and an Apple® iPhone® "App" (application) downloaded from the Apple® iTunes® App Store. The gateway plugs into the diagnostic port under the dash. Installation takes seconds and requires no tools!

DashBoss will work on any car or truck made after 2007 and most vehicles made after 2005. Please check www.dashboss.com for details on pre-2008 vehicles.

Intuitive Dashboard displays allow you to monitor things at a glance. Choose from hundreds of available parameters and flip between dashes with the swipe of a finger.

Customizable gauges can be set to any parameter, in any combination, for any vehicle with a few simple touches of the screen.

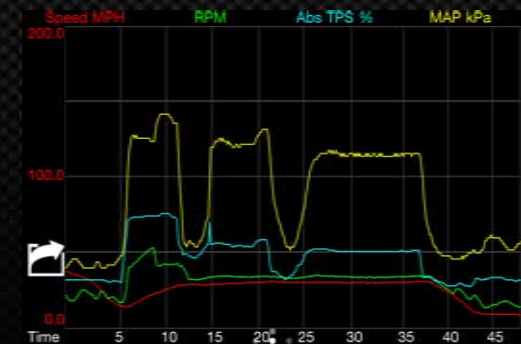

Set Color-coded alerts for any parameter and any value.

POWER AT YOUR FINGER TIPS:

- Calculate precise 0 to 60 and ¼ mile times
- Calculate weather-corrected performance numbers
- Display hundreds of vehicle parameters in user configurable gauges
- Data log any parameter
- Set automatic alerts
- Diagnose trouble codes and clear check engine lights
- Add up to TWO Wide Band controller inputs

Simply touch the RECORD button on the dashboard screen at any time to start and stop data logging sessions.
